TASMANIAN SALMON OIL *for Pets*

THE ULTIMATE SUPPLEMENT FOR PET HEALTH & WELLBEING

ANUERA® ANIMAL NUTRITION | Tasmanian Salmon Oil for Pets is the ultimate source of Omega 3 fatty acids and a great addition to your pet's diet to aid in overall health and wellbeing. Our 100% pure and natural salmon oil will help boost your pet's vitality and general health. Suitable for pets at all stages of life; from infant to senior, as well as working dogs, pregnant and nursing dogs and cats, it is the ideal natural supplement for your pet.

Our **Tasmanian Salmon Oil for Pets** has a distinctive smell and taste that your pets will love. Simply add the oil to your pet's wet or dry food once a day. Tasmanian Salmon Oil is a great addition to your pet's diet and because it is 100% natural, can compliment any other medications or supplements that your pet is currently using.

Improves Mobility and Arthritic Conditions

Most pets as they age suffer from joint conditions which may lead to inflammation, pain and mobility issues. A proper supply of Omega-3 fish oil lowers these arthritic symptoms like inflammation by directly lowering the potential production of potent prostaglandins, a kind of substance that stimulates inflammation in the joints. The two types of omega-3 fatty acids EPA (eicosapentaenoic acid) and DHA (docosahexaenoic acid) play a crucial role in lowering pain and inflammation associated with arthritis in dogs and cats. Arthritic dogs and cats, which are on regular dose of fish oil supplement, are more active and agile compared to pets not on the supplement.

Omega-3 Keeps Heart Healthy

Not confined to just joints, the fish oil moves little further when it comes to keeping the heart healthy. Omega-3 has the potential to reduce cholesterol and high blood pressure. This natural component also acts as life saviour as it acts as an anti-coagulant and prevents blood clots. All these altogether reduces the risk of heart attacks and other heart related conditions in pets. The healthy supply of fish oil lowers the greater chances of heart stroke, heart failure and other heart-related complications.

Boost Immune System in Both Young and Senior Pets

Normally, growing animals and senior pets have weaker immune systems, which can invariably give way to a number of health conditions including frequent illness, inflammation, and infection as well as chronic diseases. Omega-3 takes the command to reduce inflammation and improve the potentiality of immune system. Regular supplement of Omega-3 helps keeping pets healthy and are less likely to fall sick as it lowers the risk of varied diseases related to weaker immune system.

Omega-3 Gives that Glowing Skin and Coat

Lack of proper nutrients especially fatty acids lead to dull and dry skin and coat in pets. Moreover, the clinical signs of scratching, itching and redness of the skin are more rampant, when essential oils are in deficient. The proper supplementation minimizes the intensity of most allergies especially that occurs due to food or flea bites. This wonderful fatty acid manages many kinds of skin conditions along with lowering the chances of dry skin and dander, and many other forms of skin scaling conditions. Essential Omega-3 fatty acid supplementation works as a magic to maintain the general skin and coat health. The maximum benefit of fish oil is scaled only after 3-4 months of regular dosage.

Controls Behavioural Issues & Improves Mental Health

It would be surprising to know that according to a study the aggressive dogs possess lower amount of DHA in their blood, which may lead to conditions like aggression in dogs. Deficiency of omega-3 may also be one of the factors of anxiety and depression in cats as well as in dogs. The major component DHA present in fish oil works efficiently to lower anxiety and behavioural conditions. Another health nutrition report states that supplying fish oil regularly also increases the pet's ability to learn and retain some skills acquired during dog training. Not just confined to improving younger dogs learning ability, Omega-3 also works wonders in older pets dealing with cognitive disorders. Omega-3 fatty acid supplement is not only beneficial for pets with aggressive conditions but also boosts their cognitive function.

BENEFITS OF ANUERA® TASMANIAN SALMON OIL FOR PETS

Tasmanian Salmon for pet's oil contains approx. 125 mg Omega 3 fatty acids per gram as marine sourced triglycerides, and Long chain Omega 3 fatty acids (EPA and DHA). Salmon also contains a natural antioxidant called Astaxanthin that is been known to benefit the heart, brain, nervous system and skin health.

WHY SOURCE MARINE OMEGA FATTY ACIDS FROM TASMANIAN SALMON?

Tasmanian Atlantic Salmon comes from one of the purest and most pristine environments in the world, Tasmania, Australia. This, combined with water temperatures which are favorable for growing top quality salmon are free from major disease, enabling Tasmanian Salmon farmers to produce a superior product without peer. Our Salmon producers are a global pioneer and leader for producing the highest quality and sustainable product in the world which has led them to achieve the Aquiculture Stewardship Council (ASC) award across all their operations.

WHY ARE OMEGA FATTY ACIDS FROM MARINE SOURCE LIKE TASMANIAN BETTER FOR PETS THAN FROM A VEGETABLE SOURCE LIKE FLAXSEED OIL OR LINSEED OIL?

Dogs and Cats need Omega fatty acids, (Omega 3, 6 & 9) in their diet to stay healthy. Not all Omega 3's is the same. It is the DHA (Docosahexaenoic Acid) and EPA (Eicosatetraenoic Acid) forms found in marine sources that are more beneficial. The AHA (Alpha-linolenic Acid) form found in vegetable sources such as Flaxseed oil and Linseed oil must first be converted to EPA and DHA (the same form naturally marine sources are) to be beneficial to Dogs and Cats as they lack the enzymes need to convert a vegetable source effectively.

Dogs and Cats also need the correct balance of Omega 6 (Linoleic Acid) to Omega 3 (Linolenic Acid). The problem is they generally get enough 6 and AHA Omega 3 through their normal food but not enough marine sourced Omega 3 (DHA and EPA). Omega 3 fatty acids (DHA & EPA) are more effective than ALA at reducing joint inflammation.

ANUERA® Tasmanian Salmon for Pets is a great source of marine based Omega 3 (DHA and EPA) that Dogs and Cats really need.
